

CADABRA AI: Trial Prompt & Expected Output Reference Map

Test Specification: 120mm x 120mm x 12mm Square Block with 4 Corner Holes & 2D Drafting Sheet

TEST STEP 1 3D Model Prompting & Execution Result

Input Prompt: "Create a new part file in mm. Sketch a centered 120mm x 120mm square on the Top Plane and extrude mid-plane to 12mm thickness. On the top face, add 4 counterbored holes for M6 socket head cap screws placed at each corner with a 15mm offset from outer edges. Set material to AISI 304 Stainless Steel."

SOLIDWORKS Tree

- ▶ Part1 (Default)
- ▶ Sensors & History
- ✓ AISI 304 Steel
- Front Plane
- Top Plane
- ▶ Boss-Extrude1
 - └ Sketch1 (Fully Def)
- ▶ CBORE Hole Wizard
 - └ 4x M6 Pattern

TEST STEP 2 2D Engineering Drawing Prompt & Layout Output

Input Prompt: "Create an A3 landscape drawing sheet for this part. Place Front, Top, and Isometric views. Add smart dimensions for the 120x120mm outer boundary, 12mm thickness, and 15mm corner hole offsets. Include hole callout for the M6 counterbores and populate title block with Part Name, Material, and Mass."

VERIFICATION Trial Inspection Checklist

Feature Area	What to Check in SOLIDWORKS	Expected Result
3D Feature Tree	Open Part FeatureTree Manager	Native Boss-Extrude1 and Hole Wizard features (No imported static STL mesh).
Sketch Relations	Edit Base Sketch	Sketch is Fully Defined in black with 120mm smart dimensions.
2D Associivity	Modify 3D block thickness to 15mm	2D drawing automatically updates front view thickness to 15.00mm.
